

# FUNDOS EUROPEUS ESTRUTURAIS E DE INVESTIMENTO (FEEI)

AVALIAÇÃO DE IMPACTO NAS DIFERENTES  
REGIÕES EM PORTUGAL

RESULTS PRESENTATION

NOVEMBER | 2021

# Research Questions

1. What was the economic impact of the European Structural and Investment Funds on the Portuguese regions from 2015 to 2019?
2. How did they contribute to the regional convergence in Portugal?
3. How did they contribute to the convergence of the Portuguese economy towards the EU average?

# Data

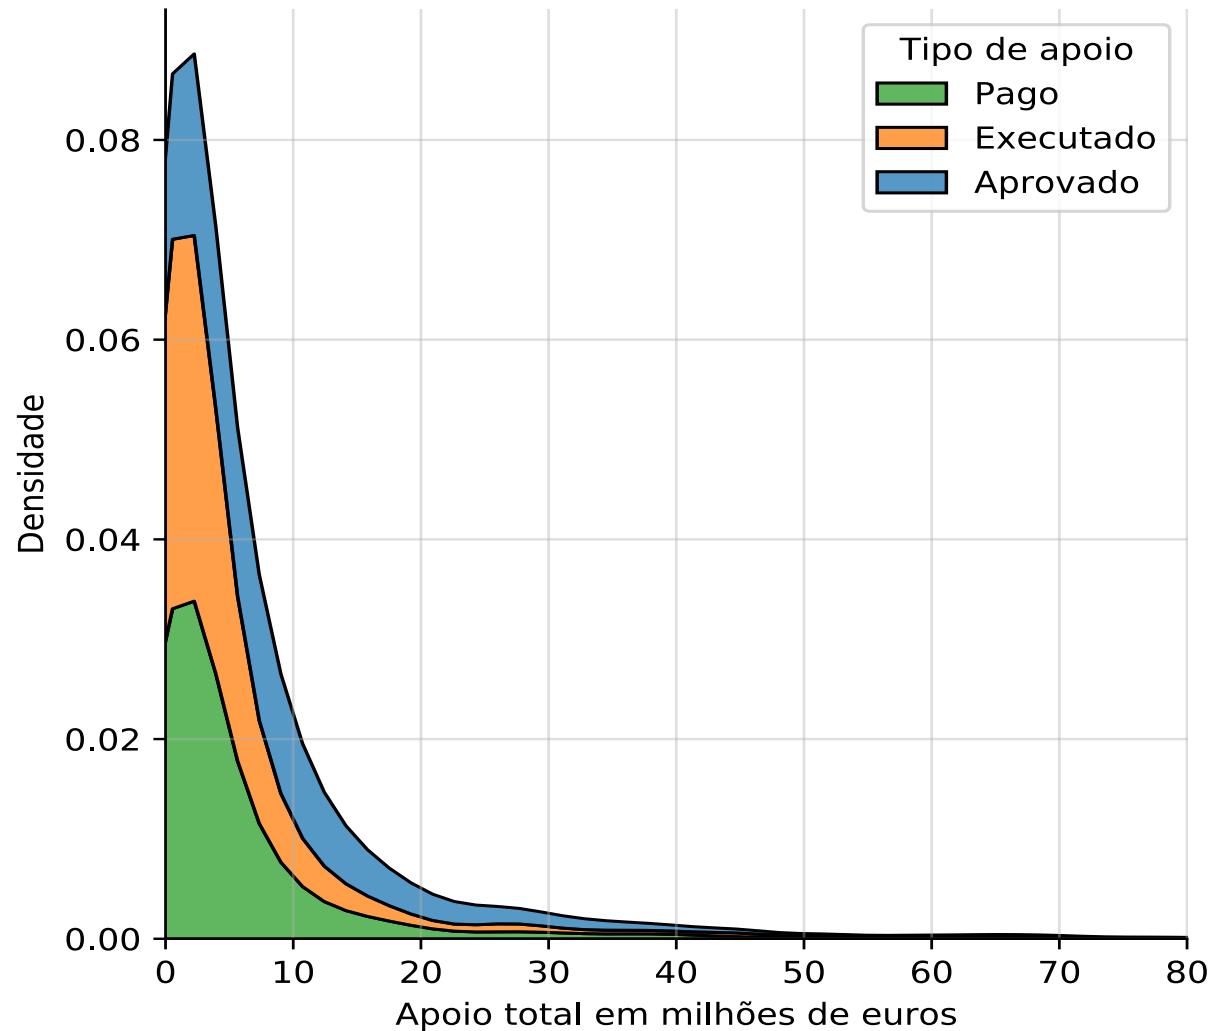

- We construct a novel panel database at the municipality level ranging from 2015 to 2019.
  - We have Approved, executed and paid EU support, gross value added, employment, unemployment rate, exports, labor productivity, number of firms and average wage for each observation.
- The construction involves two steps:
  1. Aggregate AD&C cumulative data on all operations of PT2020 (**CF, ERDF and ESF**) that were regionalized at the municipality level. The flow of funds for each year are recovered by taking the first difference.
  2. Merge the EU Funds data with INE/PORDATA data

# Descriptive Statistics

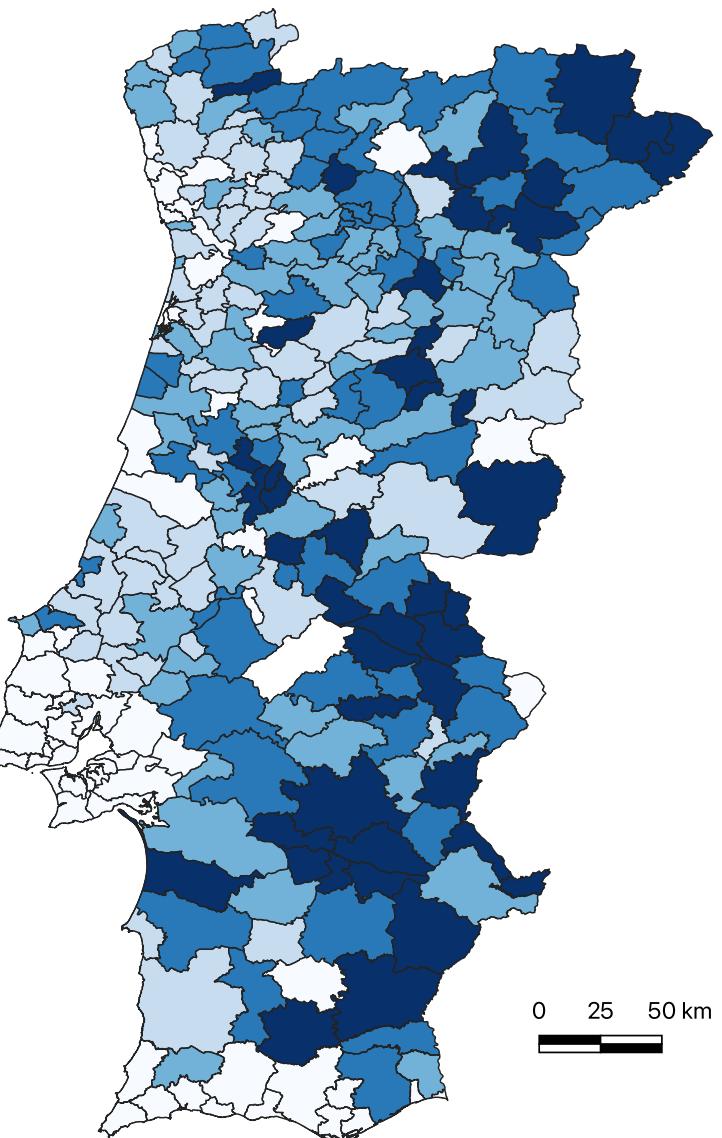

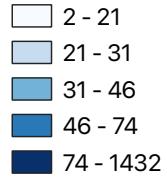

Variáveis	N	Média	Desvio-Padrão	Percentil 25	Percentil 50	Percentil 75
Apoio Aprovado (em milhões de €)	1.824	10,2	21,8	1,5	3,9	10,2

# EU funds distribution across municipalities

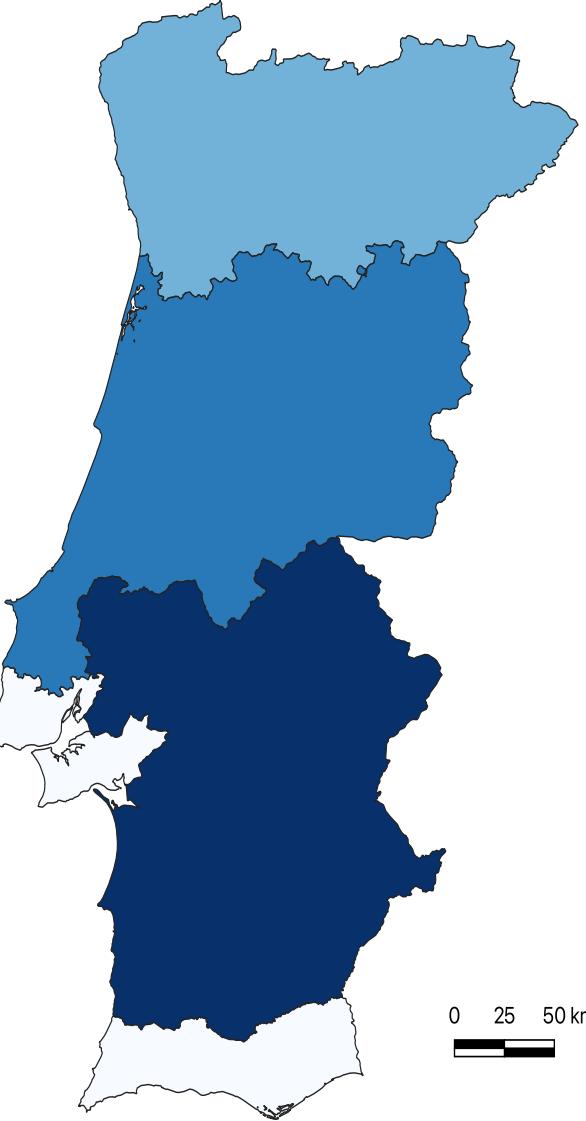

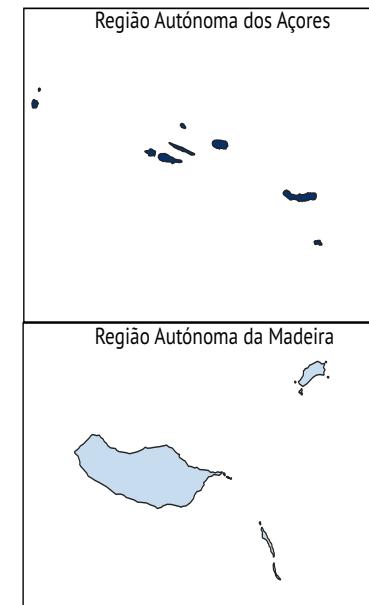

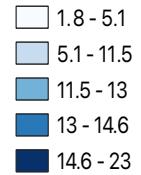

# EU funds geographical distribution across PT regions

Apoio aprovado acumulado dos FEEI  
ao final de 2020 em % do VAB

Apoio aprovado acumulado em 2020  
em % do PIB de 2019 das NUTS II

# Methodology: Identification Strategy

- Our identification strategy is similar to Kraay (2014):

**“Approved funds are unrelated to future macroeconomic shocks and subsequent payments of those funds are unrelated to same-period macroeconomic shocks.”**
- First part of the statement seems plausible. Second one dubious.
- We deal with this issue by making use of time fixed effects (control for business cycle) and local economic conditions controls.

# Methodology: Identification Strategy

- In this way, we argue that we get variation from funds payments that is cleaned from changed economic conditions.
- The relevant counterfactual for our analysis is:
  - **Cross-sectional variation:** In a given year, municipalities that have same characteristics but received different EU funds
  - **Time variation:** variation in EU funds payments over the years for the same municipality.

# Methodology: Econometric Model

Local Projections (Jordà, 2005):

$$\Delta Y_{i,t+h} = \alpha_i + \tau_t + \beta_h \Delta FEEI_{i,t} + \gamma' X_{i,t} + \epsilon_{i,t+h} \quad h=0, 1, 2, 3. \quad (1)$$

- $\Delta Y_{i,t+h}$  is the difference between the outcome variable in  $t+h$  and  $t-1$
- $\alpha_i$  and  $\tau_t$  are municipality and time fixed effects, respectively
- $\Delta FEEI_{i,t}$  is the variation in EU funds payments and  $X_{i,t}$  is a vector of controls
- The coefficient of interest is  $\beta_h$ , the impact multiplier:

$$\beta_h = \partial \Delta Y_{i,t+h} / \partial \Delta FEEI_{i,t}.$$

# PT EU funds multipliers: Comparison with Literature estimates

- **PT**
  - Gil et al. (2021) estimate a national cumulative multiplier of around 0.9 (2015-2023)
- **EU**
  - Durand and Espinoza (2021) find multiplier of 1.2 on impact, and 1.8 one year later.
  - Canova and Pappa (2021) find a multiplier of 1.8 for ERDF (FEDER) and -0.57 for ESF in impact, and 1.58 and 2.57 one year later for each fund, respectively.

# PT EU funds multipliers: Comparison with Literature estimates

# PT2020 EU funds Impact on Regional Convergence

- We use the gross value added multipliers to construct the following counterfactual exercise:

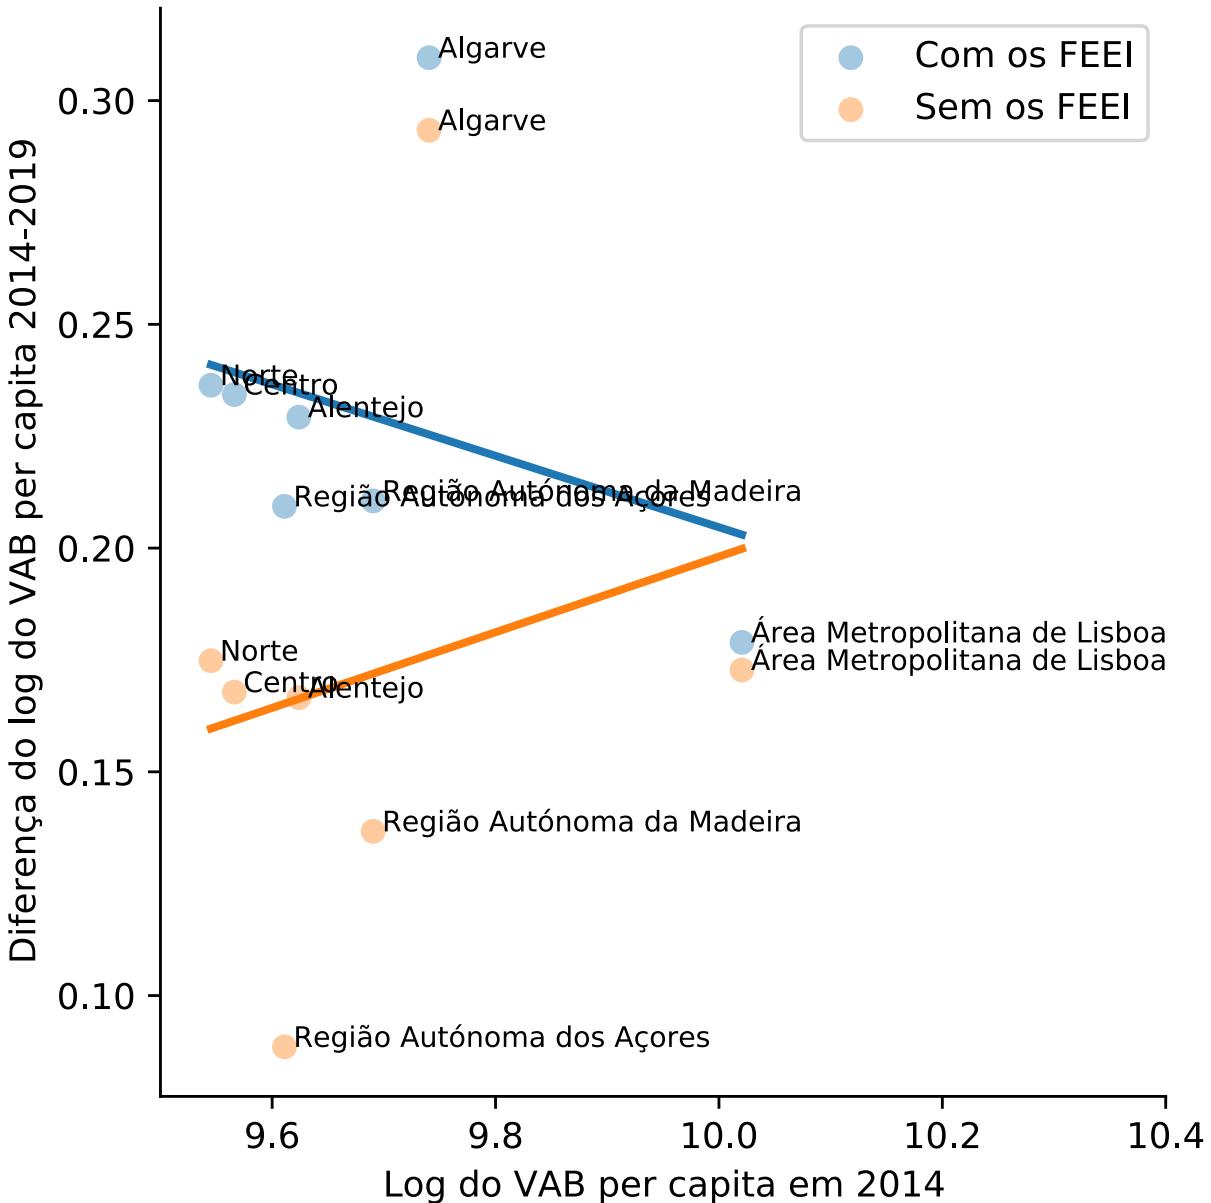

How woud the regional convergence would look like within Portugal and relative to EU if PT2020 had not existed?

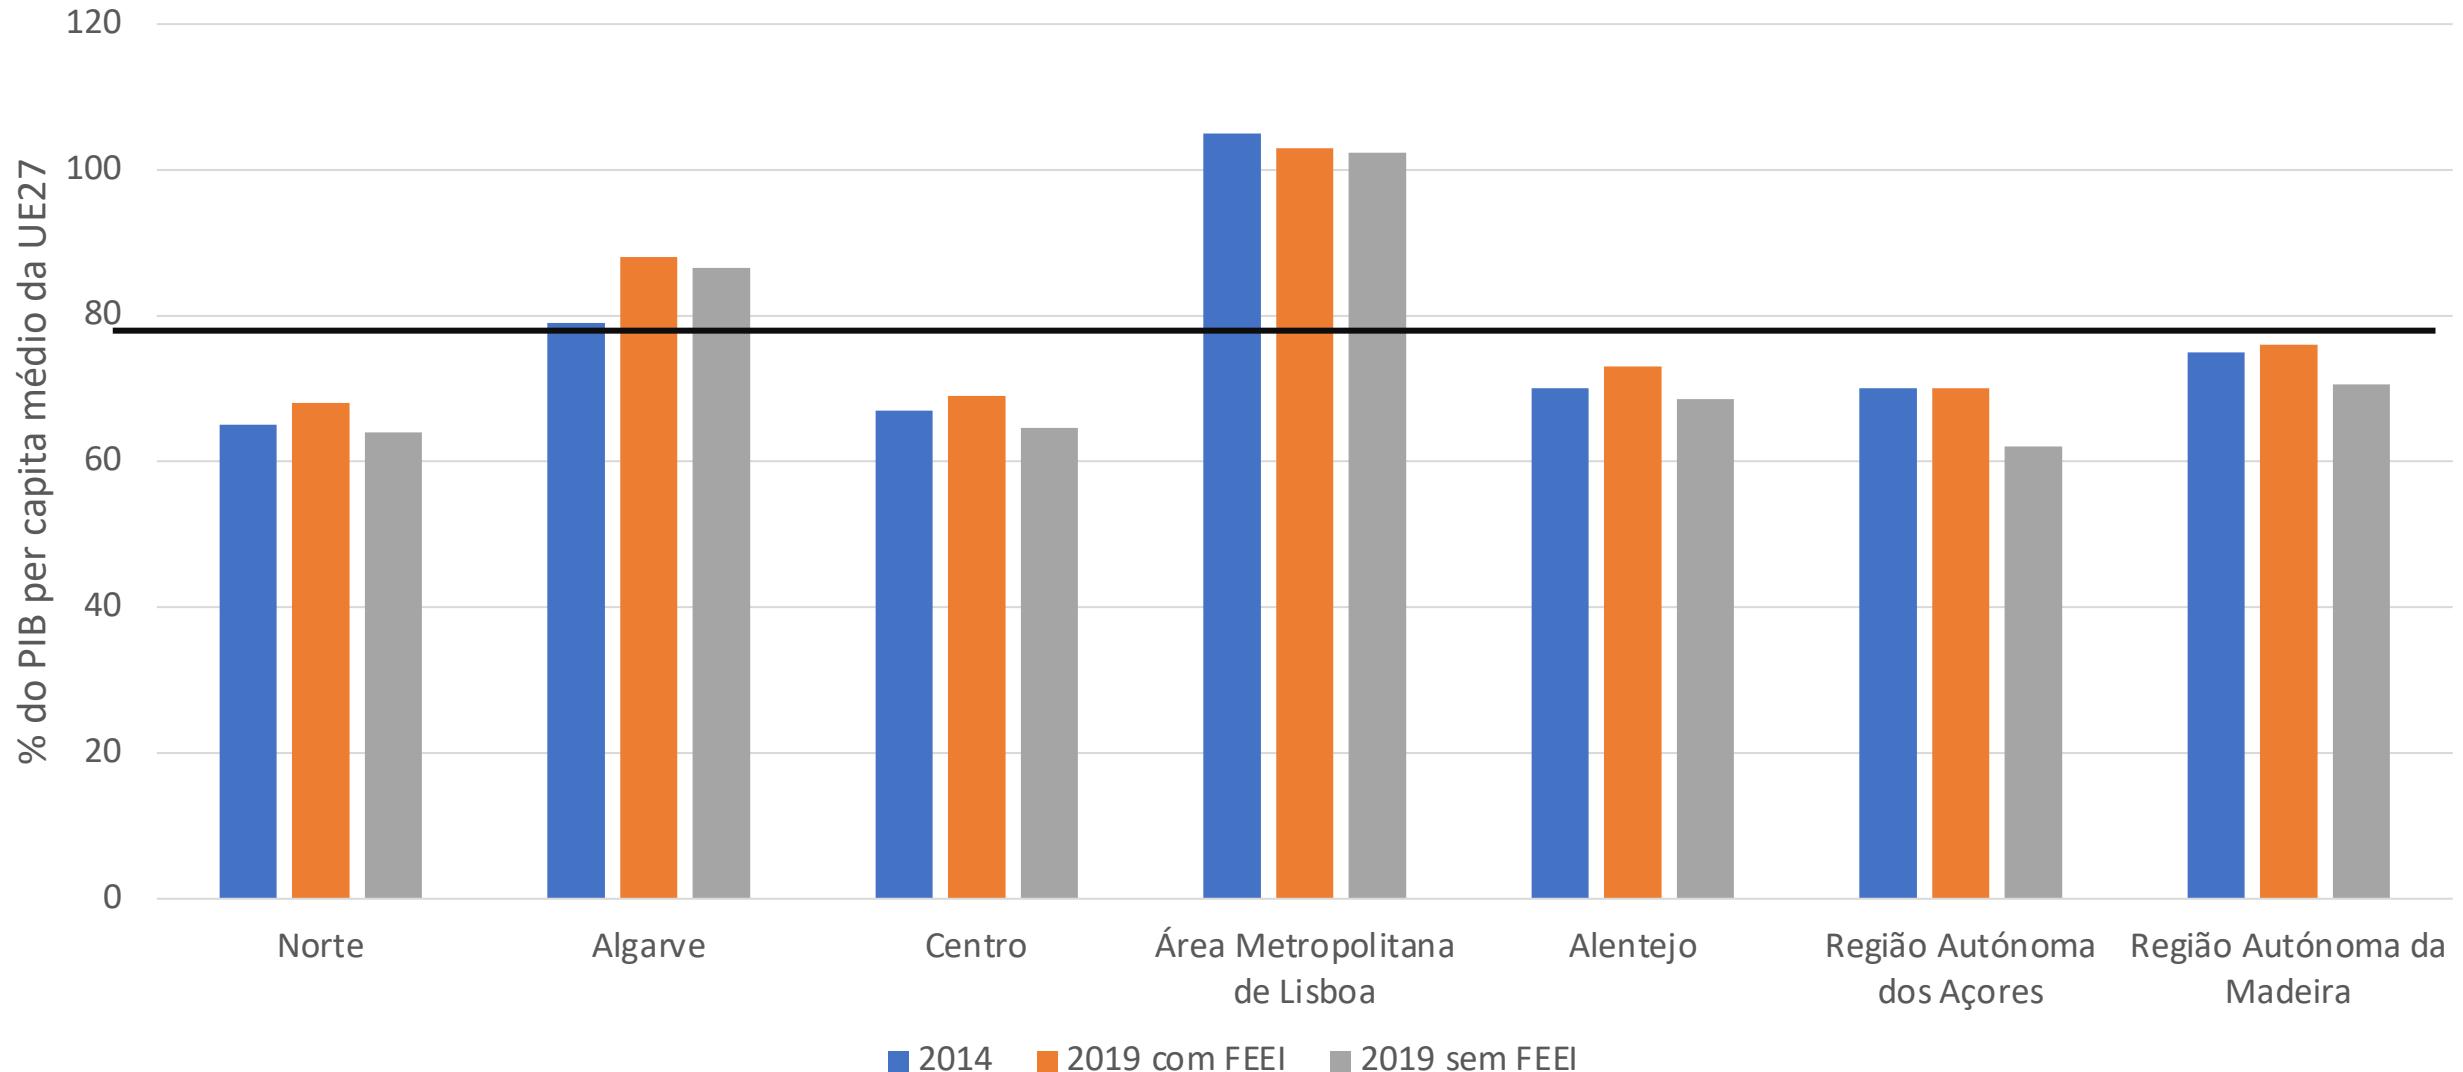

# PT2020 EU funds Impact on Regional Convergence: Municipalities

# PT2020 EU funds Impact on Regional Convergence: NUTS II

# PT2020 EU funds Impact on Regional Convergence: NUTS II to EU

# Conclusion

1. *What was the economic impact of the European Structural and Investment Funds on the Portuguese regions from 2015 to 2019?*

**Big and Persistent impact**

**Municipalities:** 80 cents in gross value added for each euro of EU investment in the same year, increasing to 2.4 euros after three years.

2. *How did they contribute to the regional convergence in Portugal?*

**Critical role:** without EU funds Portugal regions would have diverged

3. *How did they contribute to the convergence of the Portuguese economy towards the EU average?*

**Critical role:** without EU funds, Portugal regions (except Lisbon Metro Area and Algarve) would have diverged relative to the EU average
